OFFICE & ARCHIVE SERIES

A3 Document Camera Scanner

A rigid, single-screw document capture station for counters and archives: 10 MP stills of A3-to-ID documents in about a second, OCR and barcode output, and TWAIN/SDK hooks into your existing systems.

Rigid head and pole by design; there are no folding joints to wear out.

An integrated copy stand with corner guides keeps documents in the right place.

A single USB 2.0 cable carries both power and data, under 2.5 W.

1-second capture from A3 down to ID cards, with three-level adjustable LED fill light.

The software does more than take photos: OCR, barcode decoding, a TWAIN driver and an SDK.

Specifications

Capture	10 MP CMOS main camera + 2 MP secondary lens
Formats	A3, A4, A5, A6, A7, business cards, ID documents
Speed	~1 second per capture
Fill light	5 LEDs, 3-level adjustable
Structure	Rigid (non-folding) head and pole; integrated copy stand with corner guides
Dimensions / Weight	360 (L) × 330 (W) × 400 (H) mm, ~600 g
Materials	ABS head, aluminium alloy pole, ABS base
Connection	USB 2.0 (power + data), driver-free, <2.5 W

Software / Expansion	OCR, barcode/QR recognition, image management, recording, watermark; TWAIN driver; SDK (B/S & C/S); 1–3 USB ports for ID card, fingerprint or audio modules

Where it is already working

Government service windows: material archiving without a flatbed's slow lid dance. Staff shoot, the system OCRs, the file is filed.

Bank counters: document and ID capture in one motion, with the image pipeline feeding the core system via SDK.

Hospitals and archives: batch digitisation of records up to A3 at a pace flatbeds cannot match, with barcode recognition for folder indexing.

Related guides

Document capture usually sits inside a larger workflow. See how scanning, signature capture and approval fit together in bank card issuance control.

Ordering information

MOQ is 2 units, a sample is built in about 3 days and mass production runs about 25 days. Figures move when the scanner leaves its standard configuration (camera resolution, A3 or A4 shooting area, or the SDK bundle); those variations are quoted in writing first.

MOQ	2 units. One at the service window and one for SDK integration against your capture software.
Sample	A sample scanner ships in about 3 days and is then checked against the acceptance criteria agreed with you, capture resolution and lighting behaviour included, before mass production starts.
Lead time	About 25 days from sample approval to shipment for the configuration and quantity on your order. Capture-quality verification against your document types is scheduled before the first sample is built.
SDK and documentation	SDK support for capture, deskew, cropping and barcode reading on your document types, plus the agreed specification sheet. Output formats (JPEG, PDF or multipage PDF) are confirmed before the order is placed.
Certification	The scanner carries CE and FCC where the specification lists them, and RoHS documentation is available for tender files. Anything your market adds is agreed before production so the test plan fits the schedule.
Packaging	Retail box contents and carton dimensions are provided with the confirmed configuration and quotation; pallet quantities and incoterms are agreed with the order. Shooting mats and calibration sheets can be packed per counter.

Request a quote

Send the document types and sizes you capture, the quantity, the destination market and your target date. We reply with the configuration, the sample plan and a written price.

The commercial questions — order size, timing, warranty and shipping — are answered on the FAQ page.
