SIGNATURE SERIES

10.1-Inch Digital Signature Pad

Capture pressure and stroke dynamics with an electromagnetic pen on a 10.1-inch screen. Fingerprint capture supports identity workflows, with an optional SM2/SM3/SM4 chip for hardware encryption.

Signatures look like signatures: the passive EM pen reads 5080 LPI at 2,048 pressure levels.

For identity workflows there is fingerprint capture, with an optional SM2/SM3/SM4 encryption chip.

Runs where your systems run: Android, Linux or Kylin OS builds.

A quad-core 64-bit Cortex-A55 platform handles all-day signing duty at the counter.

Specifications

Screen	10.1-inch
Pen technology	Passive electromagnetic, 5080 LPI, 2,048 pressure levels
Platform	Quad-core 64-bit Cortex-A55
OS	Android / Linux / Kylin (optional)
Fingerprint	Built-in fingerprint capture; confirm the module specification and any required certification for your configuration.
Optional modules	2nd-generation ID card reader; binocular liveness camera; SM2/SM3/SM4 encryption chip. Full electrical and dimensional datasheet on request.

Built for paperless sign-off

Banking and finance: account opening, loan documents and risk disclosures signed on-screen, with fingerprint binding for high-value transactions.

Government and public service: forms and confirmations at service windows, with optional ID reading and hardware encryption for configured deployments.

Logistics and field proof-of-delivery: pairs naturally with our handheld PDA and 10.1-inch tablet when POD must survive legal scrutiny.

Related guides

Signature capture is one step in a longer process. Bank card issuance control shows where it sits and what to check for audit trails.

Ordering information

MOQ is 2 units, a sample is built in about 3 days and mass production runs about 25 days. Figures move when the pad leaves its standard configuration (pen tether, display size or SDK bundle); those variations are quoted in writing before you order.

MOQ	2 units. One at the counter and one for signature-capture integration testing.
Sample	Samples are built and shipped in about 3 days, then each unit is checked against the acceptance criteria agreed with you, pen pressure response and signing surface included, before mass production starts.
Lead time	About 25 days from sample approval to shipment for the configuration and quantity on your order. Pen and signing-surface verification against your capture workflow is scheduled before the first sample is built.
SDK and documentation	SDK support for signature capture, pressure data and encryption options on your build, plus the agreed specification sheet. Image and data output formats are confirmed before the order is placed.
Certification	The pad carries CE and FCC where the specification lists them, and signature-capture documentation is available for compliance review. Additional approvals are agreed before production.
Packaging	Retail box contents and carton dimensions are provided with the confirmed configuration and quotation; pallet quantities and incoterms are agreed with the order. Pen tethers, spare nibs and cable sets are packed per counter on request.

Request a quote

Send the signing workflow and the SDK you use, the quantity, the destination market and your target date. We reply with the configuration, the sample plan and a written price.

The commercial questions — order size, timing, warranty and shipping — are answered on the FAQ page.
